**Experiments and Demonstrations in Physics: Bar-Ilan Physics Laboratory (2nd Edition)** Yaakov Kraftmakher

“...Yaakov Kraftmakher... has written a nearly encyclopedic book containing 88 experiments and demonstrations that he has developed, adapted, or refined for his university... Kraftmakher's book is a truly impressive work, with something for everyone... And it is especially helpful to those who already use Pasco equipment.” Julien C Sprott, *Physics Today*, March 2008 “...I would recommend this book for any one setting up labs for an undergraduate program for physics majors. These experiments should be an excellent preparation for a career involving experimental physics... Many of these experiments would serve well as a source of ideas for undergraduate research projects...” Richard M Fuller, *Amazon Reviews*, 27 April 2008 “...The demonstrations are broken up into chapters covering different aspects of physics, fairly typically. The chapter on Nobel Prize experiments is a little unusual, but quite impressive. Each experiment has notes on how to do it, diagrams and photos in black and white, and a chunk of relevant scientific theory...” Gary Williams, *Physics Education*, May 2008 A laboratory manual for high schools, colleges, and universities. The second edition contains more than 140 experiments and demonstrations presented in ten chapters: Introductory Experiments (30), Mechanics (11), Molecular Physics (11), Electricity and Magnetism (13), Optics and Atomic Physics (12), Condensed Matter Physics (11), Semiconductors (10), Applied Physics (11), Nobel Prize Experiments (10), and Student Projects (25). All the experiments are illustrated through the results of real measurements. New experiments developed by the author in 2007–2014 are added to this edition.
