Building Parallel Programs: SMPs, Clusters & Java (Advanced Topics) Alan Kaminsky

This text is intended for parallel programming courses within computer science departments at both four-year and two-year colleges. More specifically, this text is ideal for those courses in parallel programming and parallel computing where Java is the preferred language. Parallel programming is an elective course offered within most computer science programs. Parallel programming teaches students how to run programs across several computers, as opposed to running a single program on one computer. One advantage of being able to perform parallel programming is the ability of a computer scientist to test many versions of one problem simultaneously. The course, while an elective, is offered within most computer science departments at most universities. Parallel computing is a stable subdiscipline within computer science - some say that with the more powerful microcomputers being developed, it has the potential to gain more interest in coming years. With the prevalence of Java as a programming language, this book offers a more modern take on parallel programming, which will appeal to customers. This book is much more up to date than any other choices on the market today, particularly the market leader from Morgan-Kaufmann, which has not been updated since 1996. The market is looking for a new, up-to-date option and this book delivers with its Java focus and the credentials of the author. Reviewers commented positively on the author's clear writing style, which will be beneficial to students who often are forced to grapple with muddled texts at these higher levels. The author will make unique Java code samples and toolkits available (student downloads on course.com and also on the instructor's website). This book will help further our advancement into higher level portions of the computer science market as we seek to publish a full breadth of choices for the computer science curriculum.

From reader reviews:

Donald Rose:

Have you spare time for the day? What do you do when you have far more or little spare time? Yep, you can choose the suitable activity regarding spend your time. Any person spent all their spare time to take a walk, shopping, or went to the particular Mall. How about open or perhaps read a book entitled Building Parallel Programs: SMPs, Clusters & Java (Advanced Topics)? Maybe it is for being best activity for you. You already know beside you can spend your time using your favorite's book, you can cleverer than before. Do you agree with its opinion or you have other opinion?

Timothy Walker:

Book is to be different per grade. Book for children till adult are different content. As we know that book is very important for us. The book Building Parallel Programs: SMPs, Clusters & Java (Advanced Topics) had been making you to know about other understanding and of course you can take more information. It is quite advantages for you. The e-book Building Parallel Programs: SMPs, Clusters & Java (Advanced Topics) is not only giving you more new information but also being your friend when you truly feel bored. You can spend your personal spend time to read your book. Try to make relationship with the book Building Parallel Programs: SMPs, Clusters & Java (Advanced Topics). You never feel lose out for everything in case you read some books.

Harry Alvey:

Often the book Building Parallel Programs: SMPs, Clusters & Java (Advanced Topics) has a lot associated with on it. So when you make sure to read this book you can get a lot of gain. The book was authored by the very famous author. Tom makes some research previous to write this book. This particular book very easy to read you will get the point easily after scanning this book.

Alicia Cain:

This Building Parallel Programs: SMPs, Clusters & Java (Advanced Topics) is great publication for you because the content and that is full of information for you who also always deal with world and also have to make decision every minute. That book reveal it data accurately using great manage word or we can claim no rambling sentences inside. So if you are read the item hurriedly you can have whole data in it. Doesn't mean it only provides you with straight forward sentences but challenging core information with attractive delivering sentences. Having Building Parallel Programs: SMPs, Clusters & Java (Advanced Topics) in your hand like having the world in your arm, information in it is not ridiculous 1. We can say that no reserve that offer you world within ten or fifteen second right but this book already do that. So , this is certainly good reading book. Hey Mr. and Mrs. occupied do you still doubt that?
