How to build awesome browser applications that scale to mobile devices, even if you've never programmed before. Do you want to build browser applications that make people say "wow!" when they see it? Of course you do! I do too. How about apps that look great on a mobile device and size automatically for different screens? Yep, I want that too. Twitter Bootstrap is the tool for you. **Designed for everyone, everywhere.** Bootstrap is a framework that makes front-end web development faster and easier. A couple of guys at Twitter invented it and later made it open source. Other people have joined in and it is now in its third major release. Bootstrap is great for people of all skill levels, devices of all shapes, and projects of all sizes. But there aren't really enough good books out there to help you learn Bootstrap if you're new to it..until now. **The Joy of Bootstrap** My books don't cover every function and nuance-- those books are too much like bricks for my taste-- instead my books are relatively thin with the goal to launch you into a subject as quickly as possible and empower you with the basics **right away.** The book will have tons of source code which you can tweak and play with on the companion website <http://www.joyofbootstrap.com> The book will walk you through the code and explain how it works. We'll also continue to use the successful metaphor of "Sam's Used Cars", a fictional web site that's also made appearances in my other books to give you a context in which to learn along. We'll take a plain and boring HTML website and bring it to life with Bootstrap. By the end you'll be able to do this too!<https://tsw.createspace.com/title/4940792/distribute/description#>
