Niche Construction: The Neglected Process in Evolution (MPB-37) (Monographs in Population Biology) F. John Odling-Smee, Kevin N. Laland, Marcus W. Feldman

The seemingly innocent observation that the activities of organisms bring about changes in environments is so obvious that it seems an unlikely focus for a new line of thinking about evolution. Yet niche construction--as this process of organism-driven environmental modification is known--has hidden complexities. By transforming biotic and abiotic sources of natural selection in external environments, niche construction generates feedback in evolution on a scale hitherto underestimated--and in a manner that transforms the evolutionary dynamic. It also plays a critical role in ecology, supporting ecosystem engineering and influencing the flow of energy and nutrients through ecosystems. Despite this, niche construction has been given short shrift in theoretical biology, in part because it cannot be fully understood within the framework of standard evolutionary theory.

Wedding evolution and ecology, this book extends evolutionary theory by formally including niche construction and ecological inheritance as additional evolutionary processes. The authors support their historic move with empirical data, theoretical population genetics, and conceptual models. They also describe new research methods capable of testing the theory. They demonstrate how their theory can resolve long-standing problems in ecology, particularly by advancing the sorely needed synthesis of ecology and evolution, and how it offers an evolutionary basis for the human sciences.

Already hailed as a pioneering work by some of the world's most influential biologists, this is a rare, potentially field-changing contribution to the biological sciences.

From reader reviews:

Kevin Nixon:

The actual book Niche Construction: The Neglected Process in Evolution (MPB-37) (Monographs in Population Biology) has a lot details on it. So when you check out this book you can get a lot of profit. The book was written by the very famous author. The author makes some research just before write this book. This particular book very easy to read you can get the point easily after looking over this book.

Mary West:

Beside that Niche Construction: The Neglected Process in Evolution (MPB-37) (Monographs in Population Biology) in your phone, it may give you a way to get more close to the new knowledge or info. The information and the knowledge you may got here is fresh from the oven so don't be worry if you feel like an previous people live in narrow town. It is good thing to have Niche Construction: The Neglected Process in Evolution (MPB-37) (Monographs in Population Biology) because this book offers to you personally readable information. Do you at times have book but you rarely get what it's facts concerning. Oh come on, that won't happen if you have this inside your hand. The Enjoyable agreement here cannot be questionable, just like treasuring beautiful island. Use you still want to miss this? Find this book along with read it from right now!

Maria Lacher:

Do you like reading a book? Confuse to looking for your favorite book? Or your book ended up being rare? Why so many query for the book? But any people feel that they enjoy with regard to reading. Some people likes looking at, not only science book and also novel and Niche Construction: The Neglected Process in Evolution (MPB-37) (Monographs in Population Biology) or perhaps others sources were given information for you. After you know how the truly amazing a book, you feel desire to read more and more. Science reserve was created for teacher or maybe students especially. Those publications are helping them to include their knowledge. In various other case, beside science reserve, any other book likes Niche Construction: The Neglected Process in Evolution (MPB-37) (Monographs in Population Biology) to make your spare time far more colorful. Many types of book like this one.

Walter Godinez:

What is your hobby? Have you heard this question when you got college students? We believe that that concern was given by teacher with their students. Many kinds of hobby, Every person has different hobby. And you know that little person just like reading or as reading through become their hobby. You need to know that reading is very important and also book as to be the matter. Book is important thing to provide you knowledge, except your own teacher or lecturer. You will find good news or update with regards to something by book. Amount types of books that can you choose to adopt be your object. One of them is niagra Niche Construction: The Neglected Process in Evolution (MPB-37) (Monographs in Population

Biology).
