21st Century Military Defense Acquisition and Doing Business with DoD: Complete Defense Acquisition Guidebook (DAG) - Decision Systems, Program Strategies, Estimates, Logistics, Test and Evaluation U.S. Government, Department of Defense, Defense Acquisition University

This is a print replica reproduction of the Defense Acquisition Guidebook (DAG) which provides the acquisition workforce with discretionary best practice that should be tailored to the needs of each program.

Acquisition professionals should use this Guidebook as a reference source supporting their management responsibilities. As an "on-line" resource, the information is limited only by the users interest or need. Some chapters contain general content; they provide individual topic discussions and describe processes and considerations that will improve the effectiveness of program planning. Some chapters may provide a tutorial on the application of these topics to the acquisition framework. Depending on the subject matter, a chapter may contain general background information, tutorial discussions, and/or discussions of the detailed requirements for each milestone decision and phase. All chapters contain non-mandatory staff expectations for satisfying the mandatory requirements in DoD Instruction 5000.02. Each chapter is designed to improve understanding of the acquisition process and ensure adequate knowledge of the statutory and regulatory requirements associated with the process. Discussions, explanations, and electronic links to related information enable the "reader" to be efficient, effective, innovative, and disciplined, and to responsibly provide warfighting capability. Each chapter lists potential ways the program manager or assigned manager can satisfy mandatory process requirements and meet staff expectations for other activities. Differences of view regarding discretionary practice will be resolved by the Milestone Decision Authority.

Chapter 1, Department of Defense Decision Support Systems,, presents an overview of the Defense Department's decision support systems for strategic planning and resource allocation, the determination of capability needs, and the acquisition of systems. Chapter 2, Program Strategies,, provides information and guidance needed to develop a Technology Development Strategy and to develop and maintain a program-level Acquisition Strategy. Chapter 3, Affordability and Life-cycle Resource Estimates,, addresses acquisition program affordability and resource estimation and describes the concept of program life-cycle cost and the processes for conducting Analysis of Alternatives. The chapter discusses specific milestone review procedures, expectations, and best practices for a variety of topics related to acquisition program affordability, cost, and manpower. The chapter further describes the role of both DoD Component cost estimates and independent cost estimates in support of the DoD acquisition system. Chapter 4, Systems Engineering,, outlines DoD guidance on systems engineering, and explains expectations for completing the Systems Engineering Plan (SEP). The chapter describes standard systems engineering processes and how they apply to the DoD acquisition system. It addresses the systems engineering principles that a program manager should apply to achieve a balanced system solution. Chapter 5, Life-cycle Logistics,, provides the associated guidance the Program Manager (PM), Product Support Manager (PSM), and Life-Cycle Logisticians can use in influencing the design and providing effective product support. Chapter 6, Human Systems Integration,, addresses the human systems elements of the systems engineering process. It will help the program manager design and develop systems that effectively and affordably integrate with human

capabilities and limitations; and it makes the program manager aware of the staff resources available to assist in this endeavor.
